Construction

The length of all the sides of the white triangle are equal to the width of the flag. Each star is oriented in such manner that one of its tips points towards the vertex at which it is located. Moreover, the gap-angle between two neighbors of the 8 ray-bundles is as large as the angle of one ray-bundle (at 22.5°), with each major ray having double the thickness of its two minor rays. The golden sun is not exactly in the center of the triangle but shifted slightly to the right.

The flag's colors are specified by [Republic Act 8491](#) in terms of their cable number in the system developed by the [Color Association of the United States](#).^{[15][20]} The official colors and their approximations in other [color spaces](#) are listed below:^[21]
